Superior-X Button Control

Now enjoy maximum flexibility, control and efficiency with the CST1545Pro and the CST645Pro. These “true three button” trackballs, coupled with **Superior-X Button Control Software**, offer the flexibility and control you need in today’s world of complex applications and games. With **Superior-X Button Control** you can “re-map” mouse buttons to over 40 pre-defined actions as well as the ability to record “mouse button macro’s” (a series of keystrokes). All of these actions can be made “application specific” which allows users to use the mouse buttons differently in each application. Application specific settings are quite useful in games since they do not inherently support extended mouse buttons. In addition, repetitive actions can be accomplished with one click saving time and effort.

The miniature case of the MicroTrac allows the user to hold the trackball in the palm of the hand minimizing fatigue. The MicroTrac also has rubberized feet allowing it to be used on the desktop like a regular trackball. It is Designed to easily accommodate both right and left hand users as well as different size hands.

Using built-in dynamic motion enhancement, this miniature Trackball is engineered to give single-pixel control while still having the ability to move to the other side of the screen with a flick of the finger. Roll the ball faster and see the cursor speed across the screen, move the ball slowly and you get single pixel accuracy.

The large, high density ball and shape of the CST1545 case act as a natural hand rest that mirrors the contour of the hand. Combined with the special “Ambidextrous” feature, the PC-Trac accommodates both right and left-handed users (without changing system settings) and hands of all sizes. No need to move your arm or rotate your wrist from side to side. You’ll enjoy this trackball’s ability to dynamically accelerate across the screen as you turn the ball faster!

Superior-X Button Control enhances the efficiency and comfort of these two, time-proven products. So if you are the hard-working, efficient type that likes maximum ease of use, reliability and control, the CST1545Pro or the CST645Pro USB trackballs are perfect for you.

If you need more buttons, request the **CST1545-5Pro**. This version adds two, 3.5MM external button jacks on the rear panel for connection of two additional external buttons. With Superior-X button Control, these two buttons add great functionality.
